# N<sup>∞</sup>ssembly AFM

The Most Cost-Effective Nano-Imaging Tool in the World

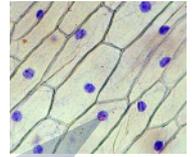

- Lego-style Atomic Force Microscope (AFM) can be reassembled hundreds of times
- A perfect starting point for your nano-applications
- Ideal for hobbyist, education, and research purposes

# Our Mission

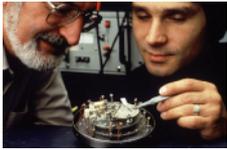

In the past 200 years, classroom microscope has been limited to the micro-scale.

Over 200 years to classroom

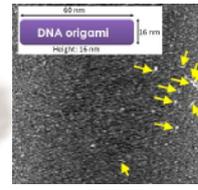

200 μm

Nobel prize winning technology

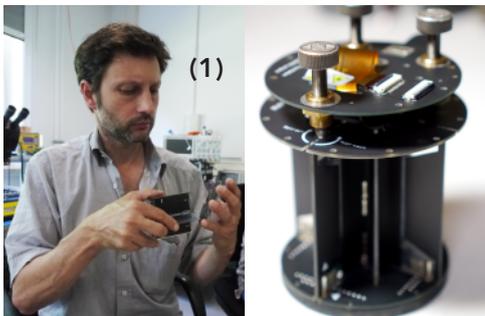

< 30 years to classroom

5 μm

**Our mission** is to liberate nanotech research and education with our flat-packed, affordable, easily-assembled AFM.

# Brand Story

Stromlinet Nano is a spin-off from LEGO Foundation's LEGO2NANO project, which promotes nanotechnology education by re-defining play and re-imagining learning. The framework concept was inspired by Dr. Sebastian Butefisch (1).

A Fraction of the Cost of Commercial AFM

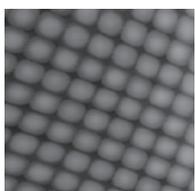

DIY Stromlingo Assembly AFM & Stromnest HAVT (Handheld Anti-Vibration Table)

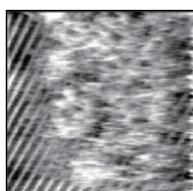

Can be easily assembled within 10 mins  
No professional knowledge or training required
